

Rotary Air Blowers

RS (S, A, R)

Horizontal type — Works as it should for a wide variety of applications.

RSS
(Discharge Bore 20, 25, 32mm)

RSA
(Discharge Bore 40, 50, 65mm)

RSR
(Discharge Bore 50, 65, 80, 100, 125, 150mm)

Applications

- Aeration at water treatment facilities;
- Stirring of various waste liquids and sewage to prevent putrefaction and scum;
- Oxygen supply at aquariums and fish farms.

Virtues

- The rush of suction or discharge has been tamed resulting in greatly reduced impact noise and pulsation noise.
- Minimized operation noise, even and stable performance plus outstanding durability.
- Compact design for space economy and effortless maintenance services.

Structural Features

Innovative helical intake / outlet

Conventional blowers were designed to discharge the air from the casing in a gust. This caused violent impact and pulsation and resultant noise. Tsurumi blowers have helical structure at the intake and the outlet. This makes the air virtually pass through a gradually closing suction port or gradually opening discharge port. The result is remarkably reduced pulsation noise.

Helical Port

Special silencer and 3-lobe rotor

A specially prepared silencer absorbs a broad range of noise frequencies from low to high. The air flow rate and pressure characteristics have been greatly upgraded by the adoption of a 3-lobe rotor with each blade deliberately displaced as to thrust direction to avoid mutual contact.

Rotor

Major Components & Specifications

Item	Discharge bore (mm)											
	20	25	32	40	50	65	80	100	125	150		
Treating fluid	Type of fluid	Air										
	Fluid temperature	0~40°C										
Blower	Structure	Rotor	3-lobe rotor									
		Shaft seal	Labyrinth									
		Bearing	Shielded ball bearing									
	Materials	Rotor	Gray iron casting									
		Casing	Gray iron casting									
Shaft	Carbon steel											
Motor	Type, Pole	Drip-proof motor, 4-pole										
	Class of insulation	Class E										
	Phase	Single-phase (0.4kW only) Three-phase										
Discharge connection		RSS & RSA / Screw (ISO Rc-type) RSR / JIS 10K flange										

Standard Accessories

- Common base..... 1 pc.
- Suction silencer (with air filter)..... 1 set
- Safety valve..... 1 set
- Pressure gauge (RSA, RSR)..... 1 set
- Foundation bolts..... 1 set

Optional Accessories

- Discharge silencer
- Flexible joint
- Gate valve
- Check valve
- Rubber vibration isolator (with vibration-isolating base)
- Totally-enclosed, outdoor motor

Reference Drawing for Piping (Example)

HOW TO USE THE SELECTION TABLE

Information about 50/60Hz Selection Tables

These tables indicate the relationships among blower models, bores, rpm, discharge pressure, actual air flow rates, and shaft power.

1. The amounts of air indicated in the tables represent suction amounts under the following standard suction conditions: temperature, 20°C; absolute pressure, 101.3kPa {1.033kgf / cm²}, relative humidity, 65%.
2. The amounts of air under reference suction conditions (temperature, 0°C; absolute pressure, 101.3kPa {1.033kgf / cm²}) can be converted into the amounts of air under the standard suction conditions by the formula below if the suction pressures are the same:

$$Q_s = Q_n \times \frac{273 + t_s}{273}$$

where

Q_s, amount of air (m³ / min) under standard suction conditions indicated on the Selection Tables;
Q_n, amount of air (m³ / min) under reference suction conditions;
Suction pressure is ambient pressure, 101.3kPa; t_s, suction temperature in °C.

3. To convert the amounts of air under discharge conditions into the amounts of air under the standard suction conditions indicated on the Selection Tables, use the following formula:

$$Q_s = Q_d \times \frac{101.3 + P_d}{101.3} \times \frac{273 + t_s}{273 + t_d}$$

where

Q_d, amount of air (m³ / min) under discharge conditions;
P_d, discharge pressure (kPa);
t_s, suction temperature in °C;
t_d, discharge temperature in °C.

4. Using the amount of air and the necessary discharge pressure obtained from the above mathematics, determine your blower model, bore, rpm, and shaft power in reference to the Selection Tables.
5. Your selectable range can be overlapped over several models. It is recommended that the one with a younger model number for cost economy, or with a larger model number for lower noise, be selected.
6. Motor output is identified by color on the Selection Tables. Select a suitable color motor from these tables.

Pumps & Other Equipment For Water Treatment

Tsurumi provides you with an extensive lineup of models to suit your specific needs.

SEWAGE PUMP

B series

Discharge Bore : 50 - 800 mm
Motor Output : 0.4 - 110 kW

RESIN-MADE SEWAGE PUMP

PU series

Discharge Bore : 40 - 80 mm
Motor Output : 0.15 - 3.7 kW

AERATOR

TRN series

Air-Inlet Bore : 32 - 150 mm
Motor Output : 0.75 - 40 kW

JET AERATOR

BER series

Air-Inlet Bore : 25 - 50 mm
Motor Output : 0.75 - 5.5 kW

FLOATING SCUM SKIMMER

FSP series

Discharge Bore : 50 mm
Motor Output : 0.4 - 0.75 kW

FLOATING DECANTER

FHP series

Discharge Bore : 40 - 80 mm
Motor Output : 0.25 - 1.5 kW

We reserve the right to change the specifications and designs for improvement without prior notice.
